

FORMATION OF CHORDS

The most difficult task for any guitarist is to memorize the shapes and positions of chords - especially those with long extensions, ie - 9th's, 13th's etc.

The trick is to become familiar with the common positions of the **7th**. Memorize the tones in and around these chords and then when needed be able to move them to form other chords

Remember-basic chords are formed around the **1st, 3rd, and 5th** tones of the scale.
Extensions have to include the **flattened 7th**.
